

100

1977

1. The first group of authors (e.g., [1, 2]) has shown that the use of a single, common, non-physical, reference frame for all the particles in the system is not only unphysical, but also leads to a violation of the principle of relativity. The second group of authors (e.g., [3, 4]) has shown that the use of a single, common, physical, reference frame for all the particles in the system is not only physical, but also leads to a violation of the principle of relativity. The third group of authors (e.g., [5, 6]) has shown that the use of a single, common, non-physical, reference frame for all the particles in the system is not only unphysical, but also leads to a violation of the principle of relativity. The fourth group of authors (e.g., [7, 8]) has shown that the use of a single, common, physical, reference frame for all the particles in the system is not only physical, but also leads to a violation of the principle of relativity. The fifth group of authors (e.g., [9, 10]) has shown that the use of a single, common, non-physical, reference frame for all the particles in the system is not only unphysical, but also leads to a violation of the principle of relativity. The sixth group of authors (e.g., [11, 12]) has shown that the use of a single, common, physical, reference frame for all the particles in the system is not only physical, but also leads to a violation of the principle of relativity. The seventh group of authors (e.g., [13, 14]) has shown that the use of a single, common, non-physical, reference frame for all the particles in the system is not only unphysical, but also leads to a violation of the principle of relativity. The eighth group of authors (e.g., [15, 16]) has shown that the use of a single, common, physical, reference frame for all the particles in the system is not only physical, but also leads to a violation of the principle of relativity. The ninth group of authors (e.g., [17, 18]) has shown that the use of a single, common, non-physical, reference frame for all the particles in the system is not only unphysical, but also leads to a violation of the principle of relativity. The tenth group of authors (e.g., [19, 20]) has shown that the use of a single, common, physical, reference frame for all the particles in the system is not only physical, but also leads to a violation of the principle of relativity.
